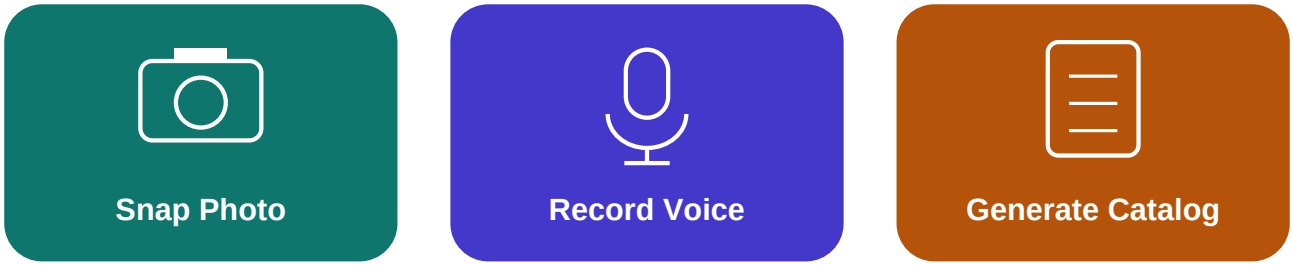
Vernacular AI E-Commerce Enabler

UX & Pilot Plan

Document 3: User Experience (UX) Journey & Field Pilot Strategy
Participant: Tanmay Dey | **Institution:** Brainware University

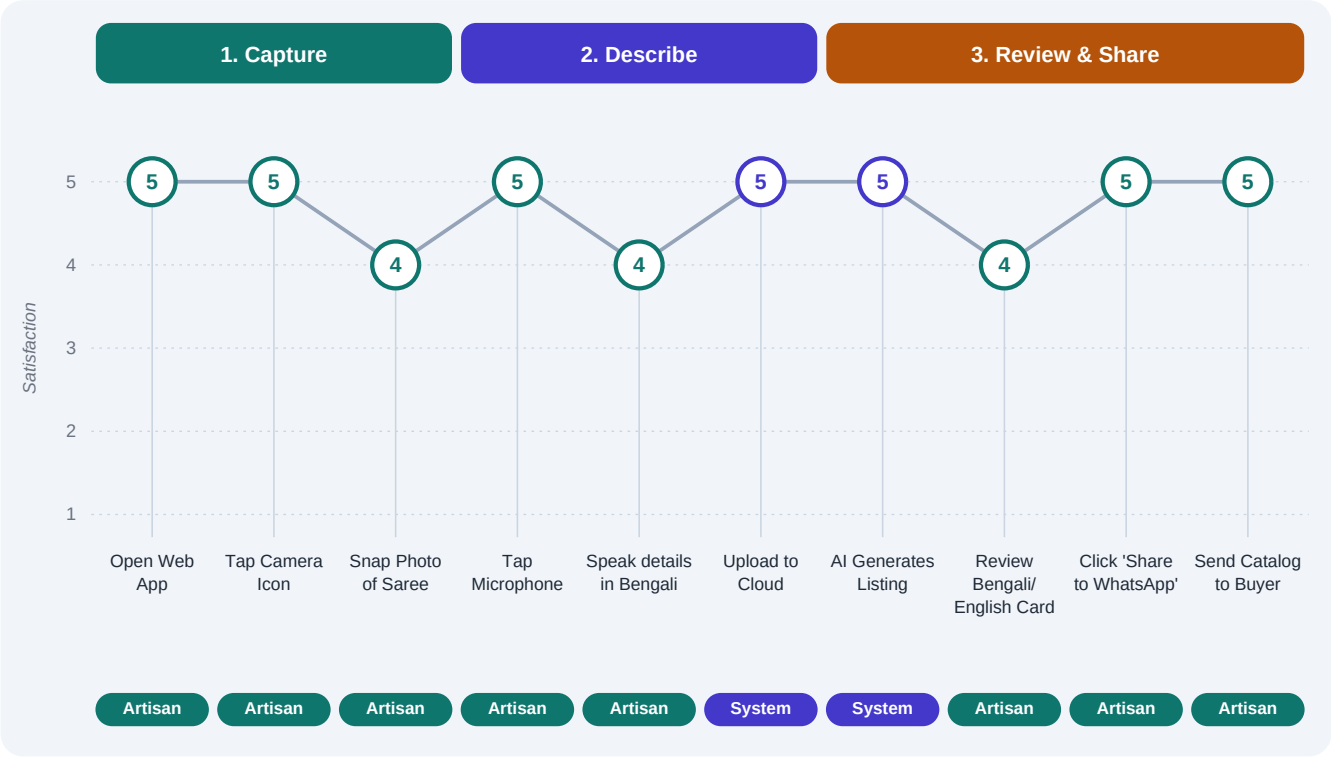
1. Design Philosophy: "Zero-Typing Interface"

Rural artisans often experience "blank canvas paralysis" when faced with complex web forms. This application removes text boxes entirely. The UI consists of just three massive, icon-driven buttons: **Snap Photo**, **Record Voice**, and **Generate Catalog**.



2. User Journey Flowchart

Artisan's Digital Onboarding Journey. Steps are scored 1–5 and tagged by who performs them.



3. Field Pilot Strategy (Weeks 5-8)

To prove the concept's viability, the pilot will execute the following steps in the Nadia handloom cluster:

1	**Identify Early Adopters:** Partner with a local cooperative society in Phulia to identify 10-15 tech-curious weavers (often the younger family members of traditional artisans).
2	**Guided Onboarding:** Conduct a one-day workshop demonstrating how to capture well-lit photos using natural sunlight and how to speak clearly into the microphone.
3	**Shadow Testing:** Observe users interacting with the Next.js web app to identify UI friction points (e.g., are the buttons large enough? Is the Bengali translation accurate?).
4	**Feedback Loop:** Use the feedback to refine the Gemini AI prompt instructions, ensuring the generated output matches the exact local terminology used by the weavers (e.g., correctly identifying anchal or buti designs).

4. Key Performance Indicators (KPIs) for the Pilot

TIME-TO-LIST

< 2 min

Target

Average time taken from opening the app to generating a WhatsApp-ready link.

GENERATION ACCURACY

> 85%

Target

Percentage of AI-generated listings that require zero manual editing by the user.

ACTIVE USAGE

Items / week

Per artisan

Number of items uploaded per artisan per week.
